Summary of findings.....	2
Status in Fall	3
College enrollment in Fall	5
Intensity of college enrollment	7
College enrollment within six years.....	8
First-year college persistence.....	10
College completion.....	11
Pathways to college completion	14
Earnings.....	15

SUMMARY OF FINDINGS

➤ College enrollment and retention

- The vast majority of program participants (89 percent) enrolled in college in the fall post high school graduation: the majority were enrolled in college and not working (74 percent), while 15 percent were both enrolled in college and working.
- Only 8 percent of program participants were neither studying nor working in the fall post high school graduation.
- College enrollment within six years of high school graduation was also examined for the 2003-2011 cohorts and indicates that nearly all participants eventually enrolled in college (98 percent).
- Conditional on enrollment, there were relatively high levels of college persistence. Eighty-four percent of the students who enrolled in college the fall following high school were still enrolled a year later: 71 percent enrolled at the same institution while 14 percent enrolled at another institution.

➤ College completion and credential attainment

- College completion within six years of high school graduation was examined for the 2003-2011 cohorts.
- While long-term enrollment rates were quite high among program participants, the completion rates were relatively low: just 43 percent of students completed college within six years of high school graduation.
- The majority of credentials earned were bachelor's degrees: 61 percent of students who completed college within six years of high school graduation earned a B.A., with the remainder earning a certificate or diploma (5 percent), an A.A. (17 percent), or a master's, doctoral, or professional degree (4 percent).

➤ Earnings

- Average¹ annual earnings in the seventh year post high school graduation were examined for the 2003-2010 cohort.
- Participants who enrolled in college within six years and completed college had an average annual wage of \$34,732 in their seventh year post high school graduation. In contrast, participants who enrolled in college within six years and did not complete college had an average annual wage of \$26,736 in their seventh year post high school graduation. Participants who did not enroll in college within six years had a significantly lower average annual wage of \$17,417 in their seventh year post high school graduation.

¹ Averages include participants who are not formally employed.

STATUS IN FALL

Table 1. Status in fall post high school graduation
